

Together, day by day, building a healthy community

HIV Testing | Adult

Definition | Percent of adults who reported they never had an HIV test.

Importance | Increasing the number of persons who are aware of their status is a critical strategy for preventing HIV infections.¹

Where are we | In 2010, 67.8% of adults in Douglas County never had an HIV test. The Douglas County percentage is lower than the state of Kansas but higher than the U.S. in 2010.

Health Disparities | Among adults in Douglas County in 2010:

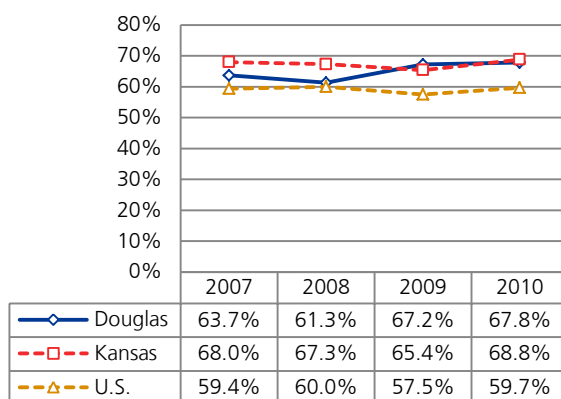

- Individuals aged 65 and older were more likely to have never had an HIV test.

Healthy People 2020 Goal | Not available

Additional Information | An estimated 1.1 million Americans are living with HIV, and 1 out of 5 people with HIV do not know they have it. HIV is a preventable disease. Effective HIV prevention interventions have been proven to reduce HIV transmission. People who get tested for HIV and learn that they are infected can make significant behavior changes to improve their health and reduce the risk of transmitting HIV.¹

Trend Analysis

Percent of adults who never had an HIV test²

*Behavioral Risk Factor Surveillance Survey sample size was considerably smaller in 2010 as compared to 2009 survey sample.
